Research Activities

- Development of Logistics Training Equipment based on Simulation
- HLA integration for Cooperative Competitive Training
- VV&A Procedures for Training Simulator within Logistics Operator

HLA Federation per Training nella Logistica

La ricerca mira a sperimentare diverse applicazioni per l'impiego della Simulazione Real-Time Distribuita, basata sullo Standard HLA, nel settore della Logistica con particolare attenzione a:

- Definizione delle Procedure Operative*
- Formazione degli Operatori*
- Sicurezza nell'Handling ed Efficienza Operativa*

Sea and River Port, Intermodal Terminal

Cocodris Simulation Engine enable to reproduce port handling devices, vehicles and vessels

Real-Time Distributed Simulation

- RESET project is focusing on the development of Real-Time Distributed Simulator that enable the following activities:
 - Multiple Training Session
 - Cooperation among Trainees
 - Competition among Trainees

Simulation Dynamic Interactions

Cocodris Simulator allows to combine different real and virtual interfaces for improving flexibility and efficient training

Weather Conditions

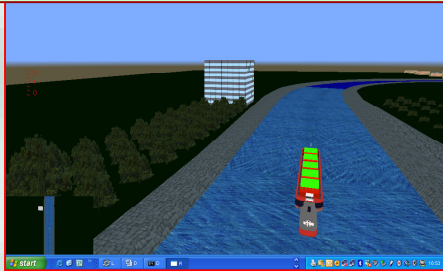

Cocodris provides very different weather conditions, including ground characteristics for testing driving ability with fog, snow, rain etc.

RIVER BOATS First Testing

Cocodris allowed to test preliminary developments of river boat virtual environments for simulation of logistics operations

Cocodris Scenario allowed to test Open Issues in each single Customization of the river

RIVER BOATS: Reset Tailoring

The Cocodris allowed to reproduce the different operations related to river navigation

Data Acquisition

DIP collected the information about mapping and river characteristics

Tratto Po - Sistema Avancconca Biconca di Cremona (Mandrachio)

- lunghezza: 0,52 km
- cunetta di fondo: >30 m
- tirante d' acqua: in funzione del livello idrometrico del Po, da 2 m a 6 m
- tirante d' aria: illimitato
- quota di navigazione: 28 - 34 m sul Imm

Sistema Avancconca Biconca di Cremona

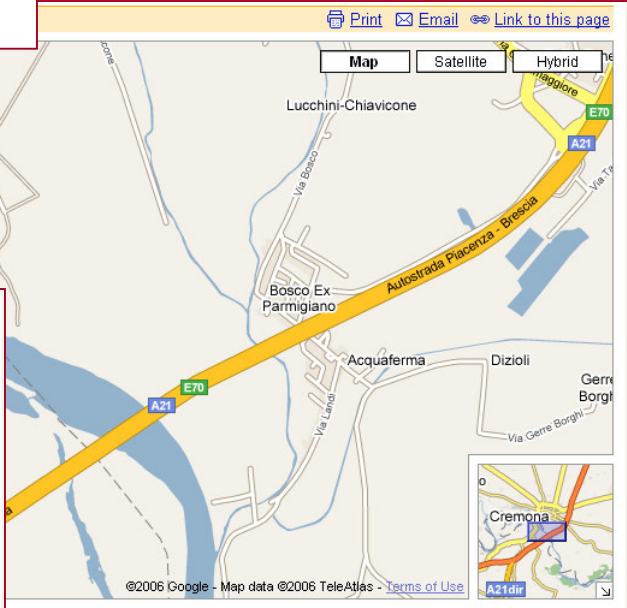

- larghezza avancconca: 12 m
- lunghezza utile avancconca: 110 m
- tipo porta avancconca: vindiana
- larghezza biconca: 12 m
- lunghezza utile biconca: 197 m
- tipo porte: a scorrimento verticale
- salto: 6,30 m
- tirante d' acqua: da 2,00 a 5,00 m
- tirante d' aria: 6,50 m

Tratto Sistema Avancconca Biconca di Cremona - Conca di Acquanegra

- cunetta di fondo: almeno 28 m
- tirante d' acqua: 3,90 - 4,30 m
- quota di navigazione: 38,30
- lunghezza: 7,256 km
- tirante d' aria: 6,50 m
- note: la prima parte di questo tratto coincide con il porto di Cremona

Porto di Cremona

- banchina verticale: 650 m
- piazzali: 80000 m2
- magazzini: 2000 m2

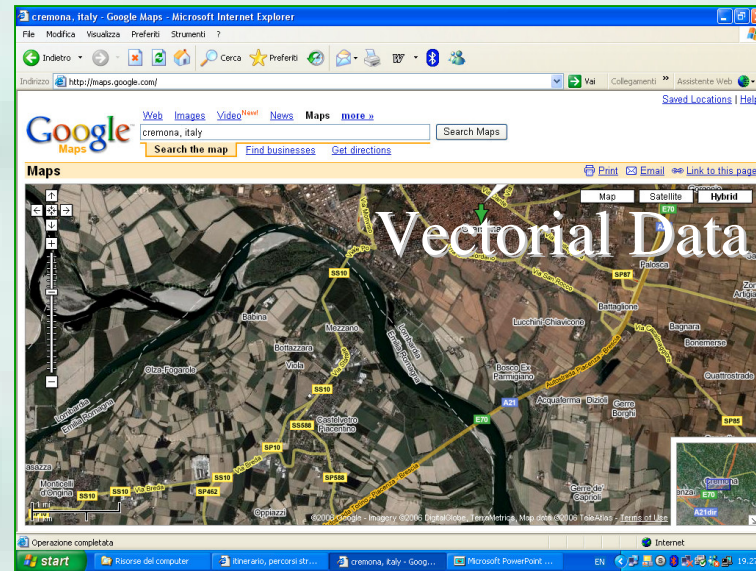

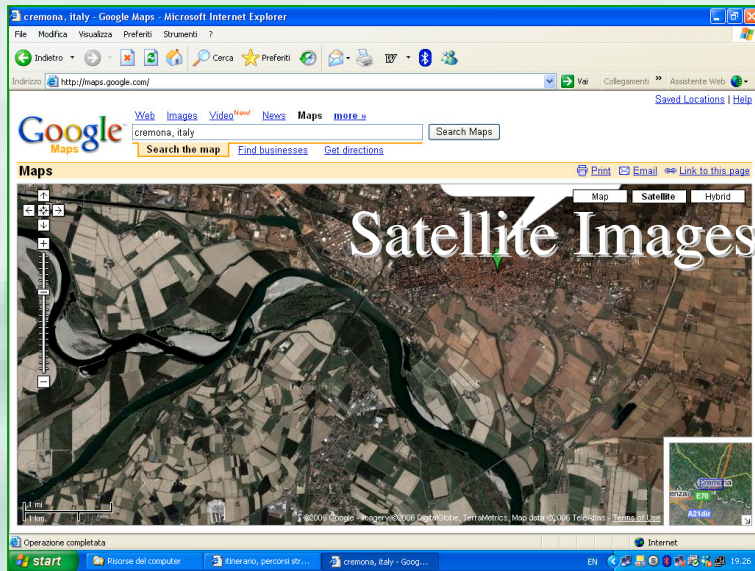

Data Collection

DIP collected directly images and data about the Cremona Area

Po River Modelling

Data have been combined to create a Synthetic Environment of PO River

Training Scenario

An Area of 400km² of Po area including Cremona Port have been introduced in Terrain Database for creating the Scenario

Port Overview

The Cremona Port has been modeled for providing an effective training framework

River Boats

River Tugs and Barges have been modeled based on the data provided by Cremona Port Authority and Public Domain Information

Bridge Original Viewpoint

The Simulator provides multiple views for training purposes

Bridge Update

MODO OPERATORE

The Simulator Includes a Virtual Deck with Commands and Control Systems

Deck Details

The Controls has been model based on the real equipment

Ship and Engine Instruments

The Virtual Deck Allows to redefine the Instrumentation based on Specific Needs

Critical Situations

The Simulator allows to reproduce the different condition in river operation, including bridge passing with strong current

River Navigation

The Virtual Bridge provide an effective approach for reproducing different instruments on multiple ships for cooperative training in river navigation

Channels & Manoeuvring

Operations related to Port Entering and River Channel Navigation are reproduced

Technical WebService for Coordination

The screenshot shows a Microsoft Internet Explorer browser window displaying the RESET website. The address bar shows the URL <http://www.dipconsortium.org/cocodris/reset/index.html>. The page title is "RESET - Microsoft Internet Explorer". The main content area features the heading "RESET" and the subtitle "River Equal Ship Simulation in Extensive Training". Below this, there are two columns of links: "Overview", "Technical Partners", "References" on the left; and "Cocodris Simulation Engine", "Meetings", "Gallery & Demo" on the right. A small image of a ship simulation is visible on the right side. At the bottom of the page, there are two columns of text providing development and contact information. The browser's taskbar at the bottom shows the start button, several open windows (E:\, Microsoft PowerPoint, 3 Internet Explorer), and the system tray with the time 23.00.

Technical Results

Conclusions

- RESET is an interesting customization of Cocodris Simulation and the application of HLA technology allows today to use this approach in the important sectors of River Navigation
- The Distributed Simulation is still today a very innovative development, allowing to promote simulation in an interactive cooperative environment based on HLA (High Level Architecture) at very low cost
- HLA Simulation is a standard for all the Simulation Projects in USA Military area since 1996 (DIP/DIPTEM is among the first active and most skilled teams worldwide); therefore this approach is still very challenging and few centers/developers are qualified to operate in this area.
