Inspiration

Et dixerunt: " Venite, faciamus nobis civitatem et turrim, cuius culmen pertingat ad caelum, et faciamus nobis nomen, ne dividamur super faciem universae terrae ".

Descendit autem Dominus, ut videret civitatem et turrim, quam aedificaverunt filii hominum,

et dixit Dominus: " Ecce unus est populus et unum labium omnibus; et hoc est initium operationis eorum, nec eis erit deinceps difficile, quidquid cogitaverint facere.

Venite igitur, descendamus et confundamus ibi linguam eorum, ut non intellegat unusquisque vocem proximi sui ".

Atque ita divisit eos Dominus ex illo loco super faciem universae terrae, et cessaverunt aedificare civitatem.

Et idcirco vocatum est nomen eius Babel, quia ibi confusum est labium universae terrae, et inde dispersit eos Dominus super faciem universae terrae

Generi, XI, 4-9

Objective

Work objectives are classified in two categories:

- ◆ Project Management Experience in
 - Communication Problem
 - Control Problem
 - Planning Problem
- ◆ Analysis and Synthesis of each Team
 - Result Valorisation
 - Problem Detection & Identification
 - Synthesis on Learned Lessons

Team Work

Work is based on team organization based on functions, with individuals cooperating for common interest

<p>LUCE</p> 	<p>ACQUA</p> 	<p>TERRA</p> 
<p>FLORA</p> 	<p>ASTRA</p> 	<p>FAUNA</p> 

Teams compete each other in order to get best project evaluation

Team OBS

LUCE

ACQUA

TERRA

FLORA

ASTRA

FAUNA

Outline your Team:

Office vs. Site

People assigned to *Office* is not enabled to leave *Office* area.

People assigned to *Site* (Construction site) is not enabled to leave the *Site*.

This approach allows to reproduce the communication problem: i.e. impossibility to move an entire technical office on site.

People enabled to travel are free to move between *Site* e *Office*.

Team Functions: Coordination

Project Manager: He is responsible of the Project and manages Resources, but he cannot reassign their tasks. He is free to move between *Site* and *Office*. He Signs all the documents to be presented to the Customer.

Communication Manager: He is responsible of all the communications. He is free to move between *Site* and *Office*. He acts as Project Manager Representative if necessary and if authorized by Project Manager.

Business: He is Responsible of quality control and Manager containment of **UCsq** respecting design.

He cannot leave from *Office*. He is responsible of official project documentation index and related coding. as well as UCsq computations.

Prof. A.G.Bruzzone
MIPET Director

Team Functions: Technical Roles

Project Engineer: He is responsible of the Project Engineering.
 He manages the people assigned to him.
 He cannot leave from *Office*.
 He is responsible of developing technical Drawings and technical details and overall engineering.
 He can sign technical documents.

Project Designer: He is responsible for architectural design
 He cannot leave from *Office*.

Engineer : He produces the drawings and technical stuff.
Assistant He works under Project Engineer supervision
 He cannot leave from *Office*.

Business : He works under Business Manager supervision
Assistant He Develops UCsq computations
 He cannot leave from *Office*.

Team Functions: Site

Site Manager:

He is responsible for Construction Site and materials.
He directs people assigned to his staff.
He cannot leave from *Site*.
He is requested to proceed on constructions just based on technical documents already accept by the customer.

Site Assistant

He works on construction execution
He works under Site Manager supervision.
He cannot leave from *Site*.

Basic Regulations

- ▼ Unless the instructions specifically state that something is permitted it shall be assumed to be prohibited.
- ▼ In case of uncertainty contact the customer before to act improperly or break regulations/policies.
- ▼ Each error is punished by a penalty; the penalties represents a critical parameter for team evaluation.
- ▼ Proper control of Quality/Development Time Ratio is the critical parameter for final evaluation
- ▼ Pay Attention to the Documentation.
- ▼ Awards to the Winners

Documentation Requirements

In Each official documents is required:

- *Emission DATE and TIME*
- *Progressive Code Number with reference to an official index maintained by BM*
- *Signature of Project Team Responsible*
- *Formal Approval of the Customer*
- *Emission of Customer Copy and File Archiving c/o Project Team responsible (i.e. Site)*

Site Construction

It is forbidden to start any kind of construction or assembling without complete documentation signed by responsible and approved by the customer.

Copy of all the construction documents shall be included in site archives for checkup and audit activity.

In Site Activity it is very important to keep full control of the inventory without losing any single construction item.

The saving of Material is calculated as the UCsq of the material used on each layer, so the total number of items computed in term of UCsq

Inventory

At the beginning and at the end of the project it shall be completed a material inventory on the Site, stating in detail for each item box received the following data:

Effective and Expected number of items for each Category

Physical Disposition of the Items on a board in order to support an inventory audit (for each item box).

It is forbidden to move items between *Site* and *Office* and viceversa.

Special approval for enabling this possibility should be requested by Project Manager to the customers.

Inventory Form

Team Name: _____

ITEM BOX Number: _____

Document Code and Description: _____

Each Item Box Includes the following UC (Unit for Construction):

Include in the Form the Value representing the effective configuration of the Item Box.

Date and Time: _____

Responsible Signature: _____

Final Presentation

- Final Summary is presented by Business Manager in English.
- Summary duration is 10 minutes maximum.
- Presentation summarizes project development.
- Presentation is an element for project evaluation.
- Presentation shall be completed Orally and/or with Powerpoint.

The goal of the presentation is to provide a critical summary of work performed, with highlights on critical issues, solution identified and learned lessons. The presentation need to include a critical self-evaluation of Team Activity and coordination.

Technical Requirements

The team is requested to design and construct a Tower, using the construction material provided and respecting following regulations:

- Total Height passing 25 UCS_h (~50 cm).
- Total Surface (to be computed as sum of all the floors) passing 400 units UCS_q (~900cm²).
- Each floor need to be “Closed”, excluding windows and balcony; this corresponds to respect of Perimeter (UCSCC criteria)

Prof. A.G.Bruzzone
MIPET Director

mipet@simulationteam.com

industrial plant
engineering and
technologies

Units of Measure

Each Floor corresponds to a planar layer of UC:

UCS (Unit for Construction Standard) is represented by the following item, while UCSl (Length Unit for Construction Standard) is defined as:

(Length 4 UCSl and Width 2 UCSl)

UCSh (High Unit for Construction Standard) is defined as:

(High 1 USCh) it is corresponding to ~2 cm at assembling completion

UCSq (Surface Unit for Construction Standard) is defined as:

(8 UCSq) this corresponds to about 2.25 cm²

Genoa University

mipet@simulationteam.com

Computational Criteria

UCSCC Criteria (Closed Perimeter Criteria) requires that the total of open parts of the perimeter not exceeds 20% of the overall length of the perimeter itself:

(16 UCSl with open window of 2 UCSl = 2/16 <= 20%)

The layer surface is computed as the internal area inside the closed perimeter delimitating it:

(20 UCSq)

Activity Checklist

PM	<input type="checkbox"/>	• Filling and Delivery Project Team OBS Form
	<input type="checkbox"/>	• Office Preparation by Office Group
	<input type="checkbox"/>	• Site Group Transfer and Site preparation
	<input type="checkbox"/>	• Acquisition of Materials by Site Group from Customer
	<input type="checkbox"/>	• Material Inventory at the Project Start
	<input type="checkbox"/>	• Tower Design Sketches: Overall 3D and Prospective.
	<input type="checkbox"/>	• Plan Drawing of each Floor Layer and UCsq computation
PM	<input type="checkbox"/>	• Project Review for each 10 Floor design completion
	<input type="checkbox"/>	• Completion of Constructions and Changes required by Customer
	<input type="checkbox"/>	• Computation of Material used for the Construction
	<input type="checkbox"/>	• Customer Evaluation and Approval
	<input type="checkbox"/>	• Dismounting the Construction
	<input type="checkbox"/>	• Material Inventory at the conclusion of the project
	<input type="checkbox"/>	• Material Packaging in the Item Boxes
QM	<input type="checkbox"/>	• Presentation of the Final Report

Each Phase Requires Customer Approval

Evaluation Criteria

The project evaluation is based on the technical quality, aesthetic design, successful completion of the mission, requirement satisfaction, saving in term of UCsq used and final presentation.

Errors, Documentation Omissions, Execution Delays, Inconsistencies, Not Professional Behaviors, Material Losses and/or improper use/assignation of construction items
